

Travel Content Management Editor

Mike Bastian, Ben Rose, Erin Loehr

Project Summary

Design a website for businesses to edit, promote, and organize local places, tours, events, and routes for travellers to view.

- All data entered by business will update a database, which in turn, updates an already existing app: The Traveler
- The webpage is an extension of their domain: <https://www.mytravelerapp.com/>
- Webpage must be able to be accessed on a mobile device
- Desires the capability for businesses to import data onto the website from their own personal webpage through a json or csv file (Lowest priority)
- Have a map/location view for each event or location (Highest priority)
- Should have the capability to accomplish the same tasks through different ways -- e.g. multiple ways to add an event

Website Capabilities

- Add, edit, and remove content based on existing categories: events, pubs & eateries, shopping, salons & jewelers, theaters & venues, museums & art venues, hotels, parks, education, gyms and pools, professional services, banks, free public parking
- Each location should be able to contain information such as an image, address, phone number, website, map view, summary, and nearby locations.
- Events should be able to include a summary, image, map view, and participating locations
- Import and export data to and from the business' personal webpage
- Draw routes and tours on the map
- Have a mobile view

Results

- Myself and Erin recorded the meeting on our phones with Mr. Parker's permission
- Ben took e-notes on his laptop
- Clarification
- Specific detail
- Very understanding

Database Schema

- Kyle sent us the Schema of his database
- We haven't had time to study the schema but wanted to give an idea of what it looks like

Overall Observation

- Kyle seemed easy going and straight to the point
- It was stressed that we would be using an existing azure database
- We got all of our questions answered
- Kyle seems to be willing to be very helpful through email

Easy? Hard?

- A little tough to come up with questions
- It was easy staying on task
- Very easy to get to the meeting spot
- A bit of trouble setting up the meeting(We're all busy people)

Monthly Meetings

- October 15th 10am
- Not a set day for every month

Requirement Document Planning

- Should be pretty easy
- Kyle wrote our project prompt in a very detailed helpful way
- With his prompt + our questions he answered in the meeting we should have enough info to make this easy
