Travel Content Management Editor

Mike Bastien, Erin Loehr, Ben Rose

Travel Content Management Editor

The company 14Eleven Development seeks to build a web-based travel content management solution to provide their business-to-business (B2B) clients an efficient platform to edit, showcase, and organize their content. Travelers from all over the world visit towns and cities they may know little about, and they want to experience all the local activities, places, and events during their stay. Our B2B clients require a toolset to integrate and/or sync data from external systems or sources; to build and create complex tours for travelers to follow and track on a mobile device; and to maintain their data, including text and media assets.

Meeting Details

- Wednesday 27 @ 12:00
- Notetaker: Erin Loehr

- Clarification for schema elements to be utilized in the next iteration
- Create a TOUR_PERSON table
- Higher levels of organization were passed over

Observations

- Overall the meeting went well
- We got clarification on the relations in the database
  - All tours and places will be associated to an organization
  - The places can then be associated to a tour
  - Kyle suggested a drop down menu to allow them to choose from the places they added to make it more user friendly
  - We plan to keep in touch much more this iteration to make the final product exactly what Kyle needs.
Demo

Contributions

- About the team:
  - Who did which part of the iteration?
  - What is the plan for the next iteration?
  - Are there any blocking issues/challenges etc.?
